SUMMARY

Fresh Graduate Software Engineer with hands-on experience building backend features for a Laravel-based project management system and a Node.js health prediction application. Skilled in designing RESTful APIs, integrating cloud services, and applying Repository and Service Layer patterns to keep backend code maintainable. Currently completing a Bachelor's degree in Informatics, with an academic focus on NLP model fine-tuning and a strong interest in backend engineering, cloud platforms, and applied AI.

TECHNICAL SKILLS

Languages & Frameworks: PHP, Laravel, JavaScript, Node.js, Hapi.js, React, Inertia.js

Cloud & Databases: Google Cloud Platform, Cloud Run, Google Cloud Firestore, MySQL, Docker

AI & Machine Learning: TensorFlow, TensorFlow.js, T5, BART, Optuna

Architecture & Tools: Git, RESTful API Design, Repository Pattern, Service Layer, Form Request

WORK EXPERIENCE

Back End Developer

Sep — Dec 2025

Indarchi Architect Team — PKBM d'VASTU · Klaten, Central Java

Built worker-management capabilities for a modular Laravel project-management system with a React and Inertia.js frontend.

- Developed CRUD workflows, worker-to-project assignments, and project-specific worker roles and positions.
- Implemented worker attendance connected to project-detail pages, including worker profile photo upload and display.
- Applied Repository Pattern, Service Layer, and Form Request validation to separate business logic and input validation.
- Collaborated through Git using member-based branching, code review, and merge workflows.

Back-End Cohort — HealLink Capstone Project

Sep 2024 — Jan 2025

Bangkit Academy led by Google, Tokopedia, Gojek & Traveloka

Contributed to the backend of a health-prediction application in a cross-functional team spanning backend, machine learning, and mobile development.

- Built RESTful registration and login APIs with bcrypt-based password protection.
- Integrated TensorFlow.js model inference into the health-prediction API and stored prediction history in Google Cloud Firestore.
- Containerized and deployed the backend service with Docker on Google Cloud Platform.
- Completed structured learning in Web Basics, JavaScript Basics, Back-End Basics, and Cloud Engineering.

SELECTED PROJECTS

Automatic Film Review Summarization

Undergraduate Thesis · 2025 — Present · NLP · TensorFlow, T5, BART, Optuna, IMDb

Developing an abstractive summarization model for more than 900,000 IMDb reviews by fine-tuning T5-Base and BART-Base, optimizing hyperparameters with Optuna TPE, and comparing separate and combined training strategies based on review sentiment.

HealLink Health Prediction API

Bangkit Academy · Capstone Project · Node.js, Hapi.js, TensorFlow.js, Firestore, Docker

Backend API for user authentication and health prediction, integrating TensorFlow.js inference with Google Cloud Firestore and deployed using Docker on Google Cloud Platform.

Worker Management Module

Project Management System · Professional Experience · Laravel, React, Inertia.js, MySQL, Git

Laravel module covering worker CRUD, project assignments, project-specific roles, attendance, and profile photos, with business logic organized through Repository and Service Layers.

EDUCATION

Bachelor of Informatics

2022 — 2026

Universitas Sebelas Maret

Undergraduate study in Informatics with an academic focus on software development and artificial intelligence.

- Undergraduate thesis: automatic film-review summarization using fine-tuned T5-Base and BART-Base models.
- Exploring hyperparameter optimization and training-strategy comparisons based on review sentiment.

PROFESSIONAL TRAINING

Back-End Development Path

Sep 2024 — Jan 2025

Bangkit Academy led by Google, Tokopedia, Gojek & Traveloka

Structured professional training in backend development, cloud engineering, and collaborative capstone delivery.

- Completed Web Basics, JavaScript Basics, Back-End Basics, and Cloud Engineering learning paths.
- Delivered the HealLink health-prediction capstone as a member of a cross-functional team.

CERTIFICATIONS

- **Application Development with Cloud Run** · Google Cloud
- **Becoming a Google Cloud Engineer** · Dicoding / Bangkit Academy
